PROJECT REPORT OF DIGITAL LITERACY

Submitted By: **Atharv Samediya**

Reg.No: **25MIP10027**

Programme: **M-TECH**

Branch: CSE(Data Science)

Introduction

As a newly selected Student Digital Ambassador, my responsibility is to guide fellow students in effectively using digital tools within their academic and career paths. In today's world, digital literacy goes beyond simply operating devices; it requires understanding how to use technology responsibly and professionally.
My first task is to develop a comprehensive Digital Literacy Portfolio. This portfolio aims to help students build important skills such as creating a strong professional online presence, managing their digital footprint, and practicing proper online communication. It serves as a practical guide that combines useful tools, best practices, and real-life examples to support academic and professional growth.
The initiative also promotes awareness about cybersecurity, data privacy, and responsible social media usage. After evaluation by faculty, the portfolio will be shared with students to help them interact safely and professionally in digital environments.

Task 1: Digital Literacy Awareness Infographic

For this task, I designed a one-page infographic using Canva. I selected this platform because of its user-friendly interface and powerful design features suitable for all skill levels.
The infographic is divided into three main sections:
The first section explains digital literacy as the ability to use modern technology effectively and responsibly.
The second section highlights productivity tools such as cloud platforms and collaboration software that support academic success.
The third section focuses on digital safety practices like multi-factor authentication and data protection.
I ensured the design was clean and easy to understand by using simple text, icons, and a consistent color scheme. The biggest challenge was organizing a lot of information into a single page while keeping it visually appealing and informative.

Task 2: Building a Student Digital Portfolio

To create a strong digital identity, I developed profiles on LinkedIn, GitHub, and ResearchGate.
On LinkedIn, I documented my B.Tech journey in Computer Science and Engineering and started building a professional network. I plan to use it to showcase my certifications, projects, and internships.

GitHub serves as my primary platform for coding and technical work. It helps me manage projects using version control and allows me to contribute to open-source development, improving my programming skills.
ResearchGate connects me with the research community. It allows me to explore advanced concepts and stay updated with new developments in technology.

Task 3: Coding and Collaboration Platforms

I used HackerRank to strengthen my coding skills and Google Workspace to create assessment tools.
On HackerRank, I completed the “Solve Me First” challenge, which helped me improve problem-solving, logical thinking, and coding fundamentals.
I also created a Digital Literacy Quiz using Google Forms. It included five questions with both multiple-choice and short-answer formats. By linking it to Google Sheets, I enabled automatic data collection and analysis, helping users identify areas for improvement.
I plan to continue using these platforms throughout my academic journey. HackerRank will enhance my coding abilities, while Google Workspace will support teamwork, data management, and collaboration.

Task 4: Professional Email Writing Guide

Improper email communication often leads to misunderstandings in academic environments. Messages without subject lines, greetings, or clear context—such as “Send marks fast”—are considered unprofessional.
Students must learn proper email etiquette. This includes:

- Writing a clear subject line
- Starting with a polite greeting
- Presenting the message clearly and respectfully
- Ending with a professional closing

Following these practices improves communication efficiency and builds a positive professional image.

Task 5: Cybercrime Awareness Case Study

My research on cybersecurity highlighted the growing sophistication of phishing attacks. Cybercriminals use fake logos, misleading domains, and urgent language to trick users into trusting them.
Even a single click on a malicious link can result in identity theft and financial loss.
This study has changed my online behavior. I now verify sender details, carefully check links, and avoid responding to suspicious messages. This awareness allows me to guide others in practicing safe online behavior.

Conclusion

The Digital Literacy Portfolio evaluates the essential skills students need for academic success and professional growth. Through this project, I gained practical experience in creating professional profiles, coding, designing infographics, and improving communication skills.
I also understood the importance of responsible digital behavior, including safe communication practices, proper social media usage, and awareness of cyber threats like phishing.
Using platforms like LinkedIn, HackerRank, and Google Workspace has improved my technical and collaboration skills. My research in cybersecurity has emphasized the need for constant vigilance in online activities.
Overall, this project has strengthened my digital skills and prepared me for my role as a Student Digital Ambassador. I am now confident in helping others build strong digital identities, communicate professionally, and stay secure online.
